

SUJITHA BODICHERLA

Aspiring Software Engineer

bodicherlasujitha@gmail.com | +91 8886476607 | Bangalore | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer Science undergraduate (CGPA 9.77/10) with hands-on project experience across the full software development lifecycle - designing data pipelines, building and integrating a trained ML model into a production-ready web application, and writing automated Python programs with error handling and API integration. Comfortable working across Python, Java, C++, C, and SQL, with practical exposure to object-oriented concepts, data structures, algorithms, and collaborative version-controlled development (Git/GitHub, Bitbucket, CI/CD). Quick to pick up new tools and technologies, with a strong analytical foundation from building and debugging multi-stage data and ML systems end to end.

TECHNICAL SKILLS

- Programming Languages: Python, Java, C++, C, SQL, PySpark
- Web Development: HTML, CSS, JavaScript, React
- CS Fundamentals: Object-Oriented Programming, Data Structures, Algorithms, Problem Solving
- Software Practices: Automated testing (unit-level, exception handling), Debugging, API Integration
- Version Control & CI/CD: GitHub, Bitbucket, CI/CD Pipelines, VS Code
- Cloud & Big Data: Azure Data Factory (ADF), Azure Databricks, Azure Synapse Analytics, ADLS Gen2, Microsoft Fabric, Apache Spark, Delta Lake, Spark SQL
- Databases: SQL Server, Azure SQL Database, Azure Synapse SQL, MySQL, Oracle SQL
- Visualization: Tableau, Power BI

INTERNSHIP EXPERIENCE

Python Development Intern - Saiket Systems | May 2025 - June 2025

- Completed a structured, task-based Python program covering six independent projects - a to-do list app, a number-guessing game, a file handler with error handling, a web scraper (BeautifulSoup, Requests), a currency converter using a live exchange-rate API, and a word-count/text analysis tool - applying data structures, loops, exception handling, string manipulation, and API integration throughout.

PROJECTS

AI-Powered Plant Disease Detection Web App

- Designed and trained a Convolutional Neural Network (CNN) in Python and TensorFlow to classify plant diseases from leaf images across multiple disease classes, then integrated the trained model into a production-ready web application, taking the project end to end from model code to deployed software.
- Built the end-to-end image preprocessing pipeline - resizing, normalization, and augmentation (rotation, flipping, zoom) to improve model generalization on a limited training dataset.
- Tuned model architecture and hyperparameters (learning rate, batch size, epochs), evaluating with accuracy, precision, recall, and confusion-matrix analysis to systematically reduce misclassification between visually similar disease categories.

Retail E-Commerce Data Pipeline

- Designed a parameterized Azure Data Factory pipeline to ingest sales, product, and payment data (CSV, JSON) into ADLS Gen2 from multiple source systems.
- Processed and transformed data using PySpark on Azure Databricks - cleansing, standardizing, and aggregating across bronze, silver, and gold layers - implementing Medallion Architecture with Delta Lake to improve downstream query performance.
- Built incremental loading using Delta MERGE to avoid full reprocessing on each run, and automated daily/weekly workflow orchestration using ADF triggers.

Global Demand Visualization

- Cleaned and prepared raw global retail data for analysis: removed duplicate records, handled missing/null values, and standardized inconsistent date, currency, and region formats across source files.
- Joined and consolidated multiple data sources (sales, product, and customer tables) into a unified structure, and created calculated fields for KPIs such as regional sales growth and customer segment share.

- Built interactive Tableau dashboards with filters and drill-downs, surfacing regional demand and customer segments to inform supply chain, marketing, and product strategy discussions.

EDUCATION

B.Tech, Computer Science and Engineering - Annamacharya Institute of Technology and Sciences, Tirupati | *Jul 2024 - Aug 2028*

- CGPA: 9.77/10

Intermediate (MPC) - Sri Chaitanya Junior College, Kadapa | *2022 - 2024*

- Score: 976/1000

CERTIFICATIONS

- Data Visualization - TATA Group
- Python & SQL - HackerRank

ACHIEVEMENTS

- Google Solution Challenge - recognized for contribution as ML Model Developer on an AI-powered plant disease detection app for smallholder farmers.
- QuizOff 2026 (CampusCrew) - participated in India's largest AI quiz, alongside 500,000+ students nationwide.
